

SECTION

**4-6** Changes in Form: Metamorphic Rocks

(pages 105-107)

**KEY CONCEPTS**

▲ When already existing rocks are buried deep within the Earth, tremendous heat, great pressure, and chemical reactions may cause them to change into different rocks with different textures and structures.

**■ Recalling Information: Reviewing the Main Ideas**

1. What is metamorphism?

---

---

---

---

2. Where do metamorphic rocks form?

---

---

---

---

3. How are metamorphic rocks classified?

---

---

---

4. What are foliated rocks? How do they compare to unfoliated rocks?

---

---

---

---

---
